EQUINE HEALTH CERTIFICATE

I, Dr SM Kotze, hereby certify that I have examined the following horse:

Name of horse: Anna

Breed: Friesian

Age: 13 years (with a 2-month-old foal)

Sex: Mare

Owner: Marilize Crafford

Date of examination: 4 May 2026

This examination was conducted at the request of the SPCA following a complaint received regarding the horse.

Following a thorough clinical examination, I confirm that the above-mentioned horse was in a satisfactory general state of health on the date of examination. No clinical signs of disease or parasitic infestation were observed. Clinical parameters were within normal limits, and the hooves and dentition were in good condition.

Although the horse is in poor body condition with a body condition score (BCS) of 2, no additional clinical abnormalities were identified during the examination.

The reduced body condition is most likely attributable to seasonal factors, including decreased nutritional value of grazing, as well as the increased nutritional demands of lactation, as the mare is currently nursing a 2-month-old foal.

The horse was dewormed and administered a vitamin booster injection at the time of examination. It is further noted that appropriate nutritional support will be provided going forward, and the horse will be regularly monitored to ensure improvement in body condition and overall health.
