			Doctor's Instructions - NEUTER INSTRUCTIONS: Your boy was neutered today. This is a surgical procedure, performed under general anaesthetic, which involved the removal of both testicles. A quiet, sleepy behaviour with a lack of appetite can be expected for the next 12- 24 hours. The following post-op care is recommended: -Keep him quiet for the next 24 hours. -Please keep him clean, dry, and away from swimming pools/ water for the next 14 days. -Offer him clean water and food once home. -Restrict exercise and walks for the next 5 days. Rough play and jumping should be avoided. -It is essential to prevent licking or self-trauma to the suture site. Licking the suture site can cause infection and must be avoided. Please keep his buster collar on at all times, especially at night. The collar may be removed during feeding times and placed on afterwards. This collar must be worn until the sutures are removed in 14 days time.
