| CONFINEMENT OF ANIMALS          | Free roaming - in property |

General Report Comments: Elani and I,Hugh arrived at Tomis to do the follow up.We then headed to the reception where we noticed that Bok Pretorius was in a meeting.We then headed towards the receptionist and we greeted her aswell as explained that we are there for a follow up.

She then asked us who we are here to see and we said Bok but we noticed he was in a meeting.i(Hugh) then asked whether Rickus who had assisted us the first time we were there as he could also help and is the quality control manager.She then mentioned that she will call him directly first.

We then stood outside in the sun for a while waiting patiently for Rickus to arrive .

Soon after her arrived and we then greeted him and reintroduced ourselves aswell as explained to him that we are here for the follow up.He was very welcoming and we asked him whether he had seen our previous warning via email.He said he had seen it and they have made some progress.He mentioned that they had started enquiring about the building materials in order to build more offloading ramps aswell as gridding for the bulls but also mentioned that he is going to call the maintenance manager so he could give us a proper update.

We then waited for the maintenance manager and we waited for about 15minutes until the maintenance manager arrived.We then greeted him and Rickus introduced us to him,he mentioned his name was Tjaart.After a few minutes speaking we were also joined by the Sheep abbatoir manager Aidan and the cattle manager Theuns.

Rickus then proposed all of us walk through the abbatoir and all of them were very welcoming and seemed like understanding people.

We firstly walked past the sheep holding area and mentioned that they should enforce rules for the public.The public should only offload animals through the ramps to prevent animals from jumping and possibly hurting themselves.Ramps need gridding or non slip flooring. We then walked to the cattle holding area.

Tjaart had mentioned they are still getting materials in order to improve the facility and will have it by end of September beginning October.

We then moved towards the prodding area to see the cattle run to the crush and to see the captive bolt area.Elani then requested that they put rubber matting inside the crush aswell as grinding in order for more stability for cattle.There was a metal sheet protruding from the side of the crush and Elani requested they have it fixed.

Elani also noticed they had two captive bolts aswell as the hydrolic captive bolt and also two workers ready to use them.

They also provided training to staff members after Elani had noticed excessive prodding .
