

SPCA Grassy Park

To whom it may concern,

We herewith confirm that Rihanna McKenzie (spayed DSH, black & white) has been undergoing treatment for her squamous cell carcinoma in its various stages (chemo, enucleation, advancement flap and now palliative care) at Penzance Vet in Hout Bay since September 2024.

We have last seen her on 30/12 and are aware of the progression of the cancer into her gum line as well as the open eye socket. We have agreed with her owner Samantha McKenzie to bring her back as soon as the cancer breaks through the gum or once she stops eating so we can euthanize her.

She did receive a long-acting antibiotic injection (Convenia) and is on chronic pain medication (Petcam).

Please do not hesitate to contact us should you have any further questions.

Regards,

Dr Brendan Brady
