Any other information you would like us to know? The white dog has been sterilized and is on the longest lead that her owner is willing to allow. The black dog (different owner) is unsterilized and on a short lead as the owner wraps the rest of it around the pole so that he doesn't have a lot of space to move. Both dogs very seldom have access to water and are sometimes confined inside their kennels (photo attached of the owner moving the pieces of cement so that the board can be moved).
