8 September 2026

TO WHOM IT MAY CONCERN

Patient: Lucy – 10 year old German Shepherd, spayed female

Owner: Mrs Esmaree Jordaan – 16 Narvick street, Uitzicht, Durbanville, 7550

Update:

As an addendum to initial consultation and report:

On 25/08/2026 Lucy was sedated for further examination of the right eye and orbit and chest radiographs were performed to rule out metastatic neoplasia.

Eye exam:

An advanced melanocytic mass appears to be engulfing part of the globe and extending to peripheral conjunctival tissues which are bulging outward slightly.

Chest radiographs:

At this stage there is no obvious metastasis to the lungs.

The plan remains unchanged which includes radical excision and enucleation/eccentration of the right eye and send tissue for histology to confirm tumour type. Melanoma is suspected.

Kind regards,

Dr Stephen R. Maberly BVSc (Hons)
